The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC6236 to ACC62345 encode the human NOVX proteins given in 2C hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, 2C antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, 2C antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, 2C therapy. NOVX proteins are useful for treating or preventing a pathology 2C associated with a NOVX protein in humans and for treating a syndrome 2C antibodies can be used in the treatment and diagnosis of cardiomyopathy, 2C antivodies can be used in the treatment and diagnosis of cardiomyopathy, 2C antivodies can be used in the treatment and diagnosis of cardiomyopathy, 2C congenital adrenal hypertension, congenital heart defects, acrtic stenosis, 2C valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, 2C disease, neoplasm, lymphoma, uterus cancer, diabetes, metabolic 2C disease, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, 2C hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host 2C disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, 2C Alzheimer's disease, parkinson's disease, immune disorders, 2C Alzheimer's disease, parkinson's disease, immune disorders, 2C Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, 2C Algority and 2C Algorit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-SEP-2001;

Novel human diagnosis, t protein or n proteins and nucleic acid encoding the proteins, use treatment and prevention of disorders involving the hucleic acid e.g. cardiac and neurological disorders. useful for human

Cla im 20; Page 242-243; 460pp; English.

ABR54167 to ABR54276. Nova hypotensive, dermatological, anorectic, immunocyte antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-..., antiasthmatic, metabolic, immunomodulator, neuroprotective, nocropic, antiparkinsonian and antilipaemic activities, and can be used in gene therapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host disease, AIDS, bronchial asthma, Crohm's disease, multiple sclerosis, haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. The 1 the ant the ass ass ass ant the the hypological final hypological hypolo ent invention describes isolated human NOVX proteins, ACC62236 to ACC62345 encode the human NOVX proteins go to ABR54276. NOVX sequences have antiatheroscierotic, given in

```
The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antiidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, antiparkinsonian and antilipaemic activities, and can be used in gene therapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disease, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host infectious disease, anorexia, cancer-associated cachexia, cancer, Alzhelmer's disease, parkinson's disease, immune disorders, cancer, caccer, which are used in examples from the present invention.

C ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Agee ML, Alsobrook JP, Anderson DW, B Burgess CE, Casman SJ, Catterton E, C Crabtree J, Dipippo VA, Edinger SR, E Gangolli EA, Gerlach VL, Giot L, Gorm Kekuda R, Khramtsov NV, Leach MD, Lep Malyankar UM, Miller CE, Ooi CE, Ort Pena CEA, Rieger DK, Rothenberg ME, S Spaderna SK, Spytek KA, Taupier RJ, T Zerhusen BD, Zhong M;

Novel human proteins and nucleic acid encoding the proteins, useful diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 20; Page 241; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in 2C ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antidabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antiparkinsonian and antilipaemic activities, and can be used in gene cherapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, lymphoma, uterus cancer, diabetes, metabolic disease, AIDS, bronchial asthma, Crohn's disease, mutiple sclerosis, cancer, alzheimer's disease, anorexia, cancer-associated cachexia, cancer, AIDS, bronchial asthma, Crohn's disease, mutiple sclerosis, chematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.

```
The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antiatiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antiaparkinsonian and antilipaemic activities, and can be used in gene therapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host cdisease, AlDS, bronchial asthma, Crohn's disease, mutiple sclerosis, ancer, alzheimer's disease, anorexia, cancer-associated cachexia, cancer, haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-SEP-2001;

Novel human diagnosis, t protein or n el human proteins and nucleic acid encoding the proteins, use gnosis, treatment and prevention of disorders involving the hear tein or nucleic acid e.g. cardiac and neurological disorders. useful for human

Ħ 20; Page 242; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, Chypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, antiparkinsonian and antilipaemic activities, and can be used in gene therapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, cangenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercosquilation, idiopathic thrombocytopenic purpura, graft versus host cisease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, ancreations disease, anorexia, cancer-associated cachexia, cancer, ALDS, bronchial asthma, Crohn's disease, multiple sclerosis, chaematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent FCR primers and probes for human NOVX sequences, which are used in examples from the present invention.

Chaesaclastic antilipaemic activities, and metabolic syndrome X. ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention. quences, wnic... R54277 represents a

Human; NOVX; antiatherosclerotic; hypotensive; cardiant; dermatological; anorectic; immunosuppressive; cytostatic; antidiabetic; antiinfertility; haemostatic; antiinflammatory; antiasthmatic; anti-HIV; immunomodulator; neuroprotective; nootropic; antiparkinsonian; metabolic; antilipaemic; gene therapy; cardiomyopathy; atherosclerosis; hypertension; scleroderma; congenital heart defect; aortic stenosis; valve disease; transplantation; tuberous sclerosis; obesity; congenital adrenal hyperplasia; diabetes; prostate cancer; metabolic disorder; neoplasm; lymphoma; uterus cancer; fertility; haemophilia; hypercoagulation; graft versus host disease; idiopathic thrombocytopenic purpura; AIDS; bronchial asthma; anorexia; cancer-associated cachexia; Alzheimer's disease; parkinson's disease; immune disorder; haematopoietic disorder; dyslipidaemia; une disorder; abolic syndrom syndrome gene;

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, Chypotensive, dermatological, ancorectic, immunosuppressive, cytostatic, antiidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antigathmatic, metabolic, immunomodulator, neuroprotective, nootropic, antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology CC associated with a NOVX protein in humans and for treating a syndrome CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis, CC valve disease, tuberous sclerosis, sclerosis, sclerosis, obesity, transplantation, CC congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disease, AIDS, bronchial asthma, Crohn's disease, metabolic disease, anorexia, cancer-associated cachexia, cancer, alzheimer's disease, anorexia, cancer-associated cachexia, cancer, Alzheimer's disease, Parkinson's disease, immune disorders, cancer, caccastic sequences, which are used in examples from the present invention with the human NOV35b protein in the exemplification of the present invention.

CC ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention. Novel human proteins and nucleic acid encoding the proteins, use diagnosis, treatment and prevention of disorders involving the protein or nucleic acid e.g. cardiac and neurological disorders. sequences, which are an ABR54277 represents a human human NOV35b protein in 20; Page 244; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC6236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antiadiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, antisathmatic, metabolic, immunomodulator, neuroprotective, nootropic, associated with an NOVX protein are useful for treating or preventing a pathology associated with the human disease. NOVX nucleic acids, proteins and easpeciated with the human disease. NOVX nucleic acids, proteins and atherosclerosis, hypertension, congenital heart defects, aortic stenosis, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disease, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host disease, anorexia, cancer-associated cachexia, cancer, Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, haematopoletic disorders, dyslipidaemias, and metabolic syndrome X. ACC623465 represent PCR primers and metabolic syndrome X. Charles which are used in examples from the present invention. The human NOV35b protein in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Agee ML, Alsobrook JP, Anderson DW, IBurgess CE, Casman SJ, Catterton E, Crabtree J, Dipippo VA, Edinger SR, IGangolli EA, Gerlach VL, Giot L, Gorr Kekuda R, Khramtsov NV, Leach MD, Leimalyankar UM, Miller CE, Ooi CE, Ort Pena CEA, Rieger DK, Rothenberg ME, Spaderna SK, Spytek KA, Taupier RJ, Zerhusen BD, Zhong M;

ABR54167 to ABR54276. NOVX sequences

Appotensive, dermatcological, anorectic, immunosuppressive, original properties, immunosuppressive, anti-HIV, antidabetic, antiinfertility, haemostatic, neuroprotective, nootropic, antiparkinsonian and antilpaemic activities, and can be used in gene therapy. NovX proteins are useful for treating or preventing a pathology associated with a NoVX protein in humans and for treating a syndrome associated with the human disease. NoVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, largeticus disease, Parkinson's disease, immune disorders, cancer, Alzheimer's disease, Parkinson's disease, immune disorders, cancer, haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention.

The examples from the present invention with processin invention. The 1 to ABRI ABRI antiantiantiantiantiantiantithe association the association the association the association that antian present invention describes isolated human NOVX proteins, where X is o 42. ACC62236 to ACC62345 encode the human NOVX proteins given in 54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant,

                                                                                                                                                                             This invention relates to a novel method of treating a human subject having a tumourigenic disorder or angiogenic disorder, caused by aberrant gene expression or activity of an isolated protein, by administering a modulator. The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is a DNA sequence which encodes the novel isolated human protein 9389 of the invention.
                                                                                                                                                                                                                                                                                P-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gg
Alignment Pred. No.:
                                                         differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a constitying differential gene expression, can be used in gene therapy, to formulate prognosis and to design a treatment regimen and to monitor the differentially expressed in a liver disorder.

WS-09-819-993-3
; Sequence 3, Application US/09819993
; Patent No. 6436692
; GENERAL INFORMATION:
; APPLICANT: GONG, Fangcheng et al.
TITLE OF INVENTION: ISOLATED HUMAN ENZ)
; TITLE OF INVENTION: ACID MOLECULES ENC
TITLE OF INVENTION: THEREOF
; FILE REFERENCE: CL001195
; CURRENT APPLICATION NUMBER: US/09/819,9
; NUMBER OF SEQ ID NOS: 5
; SOFTWARE: FastSEQ for Windows Version 4
; SEQ ID NO 3
; LENGTH: 28001
; TYPE: DNA
; ORGANISM: Human
; FEATURE:
NAME/KEY: misc_feature
; LOCATION: (1)...(28001)
; OTHER INFORMATION: n = A,T,C or G

; Sequence 187, Application US/0940;
patent No. 6623923
; GENERAL INFORMATION:
APPLICANT: Xu, Jiangchun
APPLICANT: Lodes, Michael J.
APPLICANT: Secrist, Heather
APPLICANT: Benson, Darin R.
APPLICANT: Meagher, Madeline Joy
APPLICANT: Wang, Tongtong
TITLE OF INVENTION: COMPOUNDS FOR TITLE OF INVENTION: DIAGNOSIS OF FILE REFERENCE: 210121.471C2; CURRENT APPLICATION NUMBER: US/CURRENT FILING DATE: 1999-09-22; NUMBER OF SEQ ID NOS: 371
SOFTWARE: FastSEQ for Windows Very SEQ ID NO 187
LENGTH: 506
TYPE: DNA
ORGANISM: Homo sapien
US-09-401-064-187

                             US-09-306-595C-1

; Sequence 1, Application US/09306595C

; Patent No. 6284506

; GENERAL INFORMATION:

; APPLICANT: HOSHINO, Tatsuo

APPLICANT: SITOGUCHI, Yutaka

APPLICANT: SITOGUCHI, Yutaka

TITLE OF INVENTION: ISOPRENIOD PRODUCTION

; FILE REFERENCE: ISOPRENIOD PRODUCTION

; CURRENT APPLICATION NUMBER: US/09/306,595C

CURRENT APPLICATION NUMBER: US/09/306,595C

CURRENT FILING DATE: 1998-05-06

PRIOR APPLICATION NUMBER: 98108210

PRIOR FILING DATE: 1998-05-06

NUMBER OF SEQ ID NOS: 43

SOFTWARE: PatentIN Ver. 2.1

; SEQ ID NO 1

LENGTH: 4775

TYPE: DNA

ORGANISM: Phaffia rhodozyma

FEATURE:

NAME/KEY: exon

LOCATION: (1305)...(1361)

NAME/KEY: intron

LOCATION: (1362)...

LOCATION: (1505)...(1504)

NAME/KEY: intron

LOCATION: (1505)...(1509)

NAME/KEY: exon

LOCATION: (1500)...(1826)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. :

Sequence 1648, Application US/09833381

Patent No. 6672186

GENERAL INFORMATION:
APPLICANT: Robison, Keith E.
TITLE OF INVENTION: No. 6672186el Nuclei
FILE REFERENCE: 5800-119
CURRENT APPLICATION NUMBER: US/09/833,38
CURRENT FILING DATE: 2001-04-11
PRIOR APPLICATION NUMBER: 09/516,448
PRIOR FILING DATE: 2000-02-29
NUMBER OF SEQ ID NOS: 2050
SOFTWARE: FastSEQ for Windows Version 3
SEQ ID NO 1648
LENGTH: 472
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: misc_feature
LOCATION: (1)...(472)
OTHER INFORMATION: n = A,T,C or G

\$45497

Aydroxymethylglutaryl-CoA synthase (EC 4.1.3.5), cytosolic, adrenal isoform - human hydroxymethylglutaryl-CoA synthase

C;Species: Homo sapiens (man)

C;Date: 24-Jul-1998 #sequence_revision 24-Jul-1998 #text_change 05-May-2000

C;Accession: \$45497; 139355

R;Rokosz, L.L.; Boulton, D.A.; Butkiewicz, E.A.; Sanyal, G.; Cueto, M.A.; Lachance, P.A.
Arch. Biochem. Biophys. 312, 1-13, 1994

A;Title: Human cytoplasmic 3-hydroxy-3-methylglutaryl coenzyme A synthase: expression, F.
A;Reference number: 139355; MUID:94304197; PMID:7913309

A;Accession: \$45497

A;Molecule type: mRNA
A;Cross-references: EMBL:L25798; NID:9410027; PIDN:AAA62411.1; PID:9410028

A;Experimental source: fetal adrenal

C;Function:
A;Description: catalyzes the condensation of acetyl coenzyme A (Ac-CoA) with acetoacetyl tase

C;Superfamily: hydroxymethylglutaryl-CoA synthase

C;Superfamily: hydroxymethylglutaryl-CoA synthase

C;Keywords: carbon-carbon lyase; cholesterol biosynthesis; coenzyme A; oxo-acid-lyase

Symmethylglutaryl-CoA synthase (EC; Species: Gallus gallus (chicken)
C; Species: Gallus gallus (chicken)
C; Date: 04-Dec-1992 #sequence_revisic
C; Date: 04-Dec-1992 #sequence_revisic
C; C; Accession: S13887
R; Kattar-Cooley, P.A.; Wang, H.H.L.;
Arch. Biochem. Biophys. 283, 523-529,
A; Title: Avian liver 3-hydroxy-3-meth
A; Reference number: S13887; MUID: 9111
A; Accession: S13887
A; Molecule type: mRNA
A; Residues: 1-522 < KAT>
A; Note: the authors translated the cc
C; Superfamily: hydroxymethylglutaryl-
C; Keywords: carbon-carbon lyase; coer
